

As of December 12th 2016, we have only 6 preliminary master K4 curves built for the R2000,7890,9890,4900,7900,9900,and 11880. (The K4 curves are used in the x900 printers when you are missing a channel due to a bad print head.)

In our building of the many hundreds of Pro curves this week, we have run out of paper. When we get paper into the R&D lab in a week or so, we will optimize and finish profiling all supported papers for these printer models.

BUT DO NOT WORRY! Piezography Pro curves are nearly universal. A gloss master curve will work for a vast array of different gloss papers and be entirely linear (more so than Advanced Black and White). The same goes for the Matte master curves.

Regards,
Your Piezography R&D Team,
Dana & Walker
